

A designer guide to collaborating with software developers

Most designers are from the bank or public sector (it is an observation)

Designers are from Venus developers are from Mars

This is not true.

A designer typically
create user experience.

translate user needs

Developers usually do.

(Need to complete from slides)

We need a lot from each other

developers, thrive of logic and visibility

Our goal is the same.

Both expert, we need both side.

Simple doesn't mean easy.

Pixel is fine what matters is consistency clear understandability concise and explicit

Agree on ways to working together.

How often do you want to collaborate?

How you should give feedback

How handovers

What I need from each other.

Teams are structure.

Ask about how development work is selected to be worked on development effort

how finished and finished a prototype is

branding guidelines you are following

Work in the open as as early as you can.

Share your skirt sketches.

Speed bowl ideas together.

Make your code open source

Have a single thought of truth.

Figma is not a communication tool

Content map with on one column style on the other content

Don't die on that hill,

Go for the four amigos instead of the three amigos

Engineers

Business Analyst project owner

Designers.

Own quality assurance

Make your own checklist.

Tested.

Give feedback before something is merge

Satisfy your design decisions with helpful context.

Design to development checklist see pictures.

Take time to understand the technology and the platform.
How data is saved and where?
how any API work.
Error that can occur.
Impact of relationships between components
A text a village a text all the thing.
Support designers in communicating context.
Work with a delivery manager to make sure time is made for the developers to attend research
Invite the whole team to playback.
Check how it's useful to communicate findings with technical team.
Communicate priorities clearly and often as they change
Explain scoping challenges early or when they can be movement in scope.
And I need help to demonstrate technical constraints to designers.
Acceptance criteria.
Facilitate the quality assurance process
Anyone in the team can give feedback
Accountability
Ask question
Look at NHS pro prototype kit
